```

## Konfiguration Let's Encrypt-Client

    sudo /bin/systemctl restart dovecot.service)
}
```

## Konfiguration NGINX

/etc/nginx/snippets/letsencrypt.conf

```
# Use acme-challenge directory from letsencrypt.sh
location ^~ /.well-known/acme-challenge/ {
    default_type "text/plain";
    alias /home/letsencrypt/letsencrypt.sh/.acme-challenges/;
}

# Hide using ACME-Client

```
# Let's Encrypt
23 4 * * * letsencrypt /home/letsencrypt/letsencrypt.sh/letsencrypt.sh -c >
/home/letsencrypt/letsencrypt.log 2>&1
```

## Verwendung des Let'sEncrypt Client für eine neue Domain

Pro Zertifikat können mehrere Domains/Subdomains integriert werden. Diese müssen in der domains.txt in einer Zeile stehen.

1. Let's Encrypt ACME-Challenge-Verifikation im VHost aktivieren

```
/etc/nginx/sites-available/example.org
```

```
server {
    ...
    include snippets/letsencrypt.conf;
    ...
}
```

2. Domain eintragen und Zertifikat erzeugen

```
/home/letsencrypt/letsencrypt.sh/domains.txt
```

```
example.org www.example.org
```

- **su - letsencrypt**
- **cd letsencrypt.sh**
- **./letsencrypt.sh -c**

3. Verbindung als Nutzer beenden

- **exit**

4. DH-Parameter erstellen

- **mkdir /etc/ssl/example.org**
- **openssl dhparam -out /etc/ssl/example.org/dhparam.pem 4096**

5. SSL mit HSTS aktivieren und SSL-Zertifikate im NGINX einbinden

```
/etc/nginx/sites-available/example.org
```

```
server {
    ...
    ssl on;

    ssl_session_cache shared:SSL:10m;
    ssl_session_timeout 10m;

    ssl_prefer_server_ciphers on;
    ssl_protocols TLSv1 TLSv1.1 TLSv1.2;

```
# Edit this file to introduce tasks to be run by cron.
#
# Each task to run has to be defined through a single line
# indicating with different fields when the task will be run
# and what command to run for the task
#
# To define the time you can provide concrete values for
# minute (m), hour (h), day of month (dom), month (mon),
# and day of week (dow) or use '*' in these fields (for 'any').#
# Notice that tasks will be started based on the cron's system
# daemon's notion of time and timezones.
#
# Output of the crontab jobs (including errors) is sent through
# email to the user the crontab file belongs to (unless redirected).
#
# For example, you can run a backup of all your user accounts
# at 5 a.m every week with:
# 0 5 * * 1 tar -zcf /var/backups/home.tgz /home/
#
# For more information see the manual pages of crontab(5) and cron(8)

Das Start-Skript für etherpad-lite sucht nach „node“ als nodejs-Server-Binary. Unter Debian lautet es nodejs:

- **`cd /usr/bin/`**
- **`ln -s nodejs node`**

Plugin-Installation

- **`sudo -u etherpad /bin/bash`**
- **`cd ~/etherpad/`**
- **`npm install ep_pad-lister`**

Konfiguration

~/etherpad/settings.json

```
{
  ...
  //IP and port which etherpad should bind at
  "ip": "127.0.0.1",
  "port" : 13378,
  ...
  ...
  "dbType" : "mysql",
  "dbSettings" : {
    "user"      : "etherpad-lite",
    "host"      : "localhost",
    "password": "XXX",
    "database": "etherpad-lite"
  },
  ...
}
```

- **`systemctl enable etherpad-lite.service`**
- **`systemctl start etherpad-lite.service`**

## Datensicherung

Die Datensicherung erfolgt verschlüsselt auf einen Server von [mape2k](#) und einen Server von [mkzero](#):

- 1 Full-Backup je Woche
- Inkrementelle Backups täglich
- Vorhaltezeit: 4 Wochen

Pakete:

- duply
- duplicity
- lftp

Installation nach folgender Anleitung: <https://wiki.fem.tu-ilmenau.de/public/technik/howto/duply>

- MySQL-Dump-Skript unter /usr/local/bin/mysql-dump einrichten
- duply mape2k-backup create

Konfiguration:
